Virtual Code Innovate

Bringing the Oracle Code Experience to You

ORACLE

WHAT IS VIRTUAL CODE INNOVATE?

Oracle's Virtual Code Innovate is a robust online event tailor-made specifically for your organization. It's a great opportunity to learn and engage in an interactive virtual setting that is designed to jump start your use of Oracle's Cloud offerings to solve your organization's most pressing use cases.

Over the course of four to five days (~4hr per day) we'll co-develop using technologies such as low-code development, integration, chatbots, cloud native, and analytics together with technical experts and advocates from Oracle. Use this opportunity to explore use cases that are valuable to your business, and work alongside your peers to bring your vision to reality. Oracle Virtual Code Innovate is all about making, breaking, and building real code.
